AESGP ERA Consortia & Matchmaking Platform

Advancing Environmental Risk Assessments through consortium collaboration

ERA requirements can be complex. For APIs used in non-prescription medicines, AESGP consortia provide a structured framework for market operators to address these requirements together, in full compliance with competition law.

Working together can help:

SHARE
Scientific expertise and resources

AVOID
Unnecessary duplication, in line with the 3Rs

GENERATE
Robust scientific data to address gaps

SUPPORT
An efficient approach to EU regulatory requirements

AESGP consortia cover the entire ERA journey

COLLECT
Existing evidence

REVIEW
Scientific literature

ADDRESS
Data gaps

DEVELOP
A generic ERA template

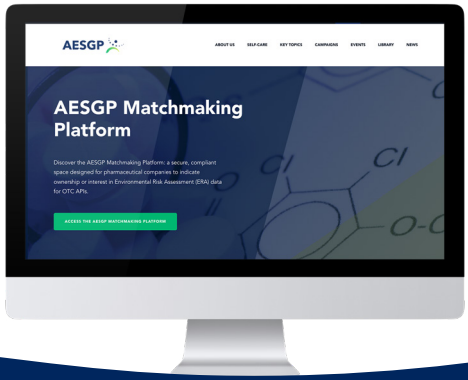

An updated list of ingredients covered by ongoing consortia activities can be found at aesgp.eu/consortia.

Explore the AESGP Matchmaking Platform

For ingredients not currently covered by an AESGP consortium, the Matchmaking Platform helps companies identify potential partners interested in the same ingredient for environmental assessment activities.

The platform enables participants to:

- Connect with relevant stakeholders
- Explore future consortium opportunities
- Avoid duplication of effort
- Accelerate preparation for ERA activities

How can AESGP support your ERA activities?

Join an AESGP consortium

For ingredients already covered by an AESGP consortium, companies can participate in ongoing ERA activities and benefit from a coordinated approach to data generation and assessment.

AESGP-managed consortia are, in principle, open to market operators, including both AESGP members and non-members.

No consortium currently available?

Use the AESGP Matchmaking Platform to connect with potential partners and explore future consortium opportunities.
